BHARGAVA A.K., WOITACH J.T., DAVIDSON E.A., BHAVANANDAN V.P.;

"Cloning and cDNA sequence of a bovine submaxillary gland mucin-like protein containing two distinct domains.";

Proc. Natl. Acad. Sci. U.S.A. 87:6798-6802(1990).

-!- SUBCELLULAR LOCATION: SECRETED.

-!- TISSUE SPECIFICITY: SUBMAXILLARY MUCOSAE.

-!- SIMILARITY: TO PORCINE APOMUCIN.

-!- SIMILARITY: CONTAINS 1 C-TERMINAL CYSTINE KNOT-LIKE DOMAIN (CTCK).
                                                                                                                                                                                                                                                                                                                                                                                                                    MUCS_BOVIN STANDARD; PRT; 563 AA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

Exceptions are indicated by an explicit note. It may be shorter because we only sequence the specified clone. It may be shorter because we arrange for a small overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone F22B5. IMPORTANT: This sequence is not the entire insert of clone F22B5.

INFORTANT: This sequence is not the entire insert of clone F22B5. In may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fulton, L., Gardner, A., Green, P., Hawkins, T., Hillier, L., Jier, M., Johnston, L., Jones, M., Kershaw, J., Kirsten, J., Laister, N., Latreille, P., Lightning, J., Lloyd, C., McMurray, A., Mortimore, B., O'Callaghan, M., Parsons, J., Percy, C., Rifken, L., Roopra, A., Sannhammer, B., Sannders, D., Shownkeen, R., Smaldon, N., Smith, A., Sonnhammer, E., Staden, R., Sulston, J., Thierry-Mieg, J., Thomas, K., Vaudin, M., Vaughan, K., Waterston, R., Watson, A., Weinstock, L., Vaughan, K., Waterston, R., Watson, A., Weinstock, L., Walkinson-Sproat, J. and Wohldman, P.

2.2 Mb of contiguous nucleotide sequence from chromosome III of C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Nematoda; Secernentea; Rhabditia; Rhabditina; Rhabditoidea; Rhabditidae; Peloderinae; Co
